2. Background

The Indian Council of Medical Research (ICMR), New Delhi, the apex body in India for the formulation, coordination and promotion of biomedical research, is one of the oldest medical research bodies in the world. The ICMR has always attempted to address itself to the growing demands of scientific advances in biomedical research on the one hand and to the need of finding practical solutions to the health problems of the country, on the other. The ICMR has come a long way from the days when it

was known as the IRFA, but the Council is conscious of the fact that it still has miles to go in pursuit of scientific achievements as well as health targets.

3. Objective

National Institute of Virology (NIV), Pune one of the constituent Institutes of the Indian Council of Medical Research (ICMR), New Delhi, has developed a new and useful TECHNOLOGY, using indigenously grown Inactivated virus and is the owner of said TECHNOLOGY including any underlying Intellectual Property(ies) and Commercialization rights. By virtue of financial support and research endeavour provided by ICMR, they legally possess the rights and authority to retain full or part of the 'TECHNOLOGY' by itself or to assign at its discretion full or part of the TECHNOLOGY including any patent(s) or intellectual property rights(s) on the invention(s) arising out of such endeavours, and/or ICMR is lawfully entitled to enter into any form of non-exclusive license agreements with selected manufacturer / manufacturers including transfer of the TECHNOLOGY through suitable agreement to any other interested manufacturers.

TECHNOLOGY

Raising equine anti-serum against SARS-CoV2 for treatment of positive COVID-19 patient

ICMR's invention/Collaborated Inventions: It is developed by ICMR- National Institute of Virology (ICMR-NIV), Pune, India a premiere institute of ICMR.

1. Title: Raising equine anti-serum against SARS-CoV2 for treatment of positive COVID-19 patient

2. Need of Technology:

A new coronavirus, SARS-CoV-2, has recently emerged to cause a human pandemic. Currently research studies are ongoing in various areas such as reagent preparations, diagnostic tests, vaccines and antiviral development. In the absence of vaccine and antiviral, the plasma from recovered COVID-19 cases has been reported as promising treatment. It is thus need of hour to explore other alternatives as the sustained source of antiserum against SARS CoV-2.

ICMR-NIV, Pune has isolated SARS CoV-2 virus, inactivation of this isolates was standardized which will be used for development of equine anti-serum against the said virus.

3. Methodology:

Please consider not disclosing technical detail.. This irradiated stock was again inoculated in Vero CCL81 to confirm that the virus has been inactivated as per standard protocol.

At laboratory level, the antigen is immunogenic and showed reactivity with anti SARS CoV-2 human antibody.

4. Application areas/Applicability: Anti SARS CoV-2 antiserum will be useful for treatment of positive COVID-19 patient.

5. Unique points:

The inactivated whole virus SARS CoV-2 antigen is safe for handling at a BSL-2 laboratory setting

6. Up scaling Status

- The tissue culture grown SARS CoV-2 antigen will be prepared by infecting Vero CCL81 cells, which will be followed by inactivation using gamma irradiation.
- The antigen lots will be tested for its inactivation and only then dispatched as per need.

7. Expected Technology:

Equine anti-serum against SARS-CoV2 will be used for the treatment of positive COVID-19 patient
